

Regions

Regions are an important component to using Cassiopeia and the Riot API.

Regions are used to identify unique accounts/summoners, return text data in the region's default local, and interact with the Riot API under the hood.

Generally speaking, you will always need to specify a region when creating an entity using Cassiopeia. For example, to create an Account you specify the region to uniquely identify the account: `account = Account(name="Kalturi", tagline="NA1", region="NA")`.

Regions are typically specified as strings (e.g. `region="NA"` or `region="EUNE"`), but you can also the enum (e.g. `region=Region.north_america`).

As of writing this, the available regions are below. You can find an updated list in the [code] (<https://github.com/meraki-analytics/cassiopeia/blob/master/cassiopeia/data.py#L4>).

```
brazil = "BR"
europe_north_east = "EUNE"
europe_west = "EUW"
japan = "JP"
korea = "KR"
latin_america_north = "LAN"
latin_america_south = "LAS"
north_america = "NA"
oceania = "OCE"
turkey = "TR"
russia = "RU"
philippines = "PH"
singapore = "SG"
thailand = "TH"
taiwan = "TW"
vietnam = "VN"
```
